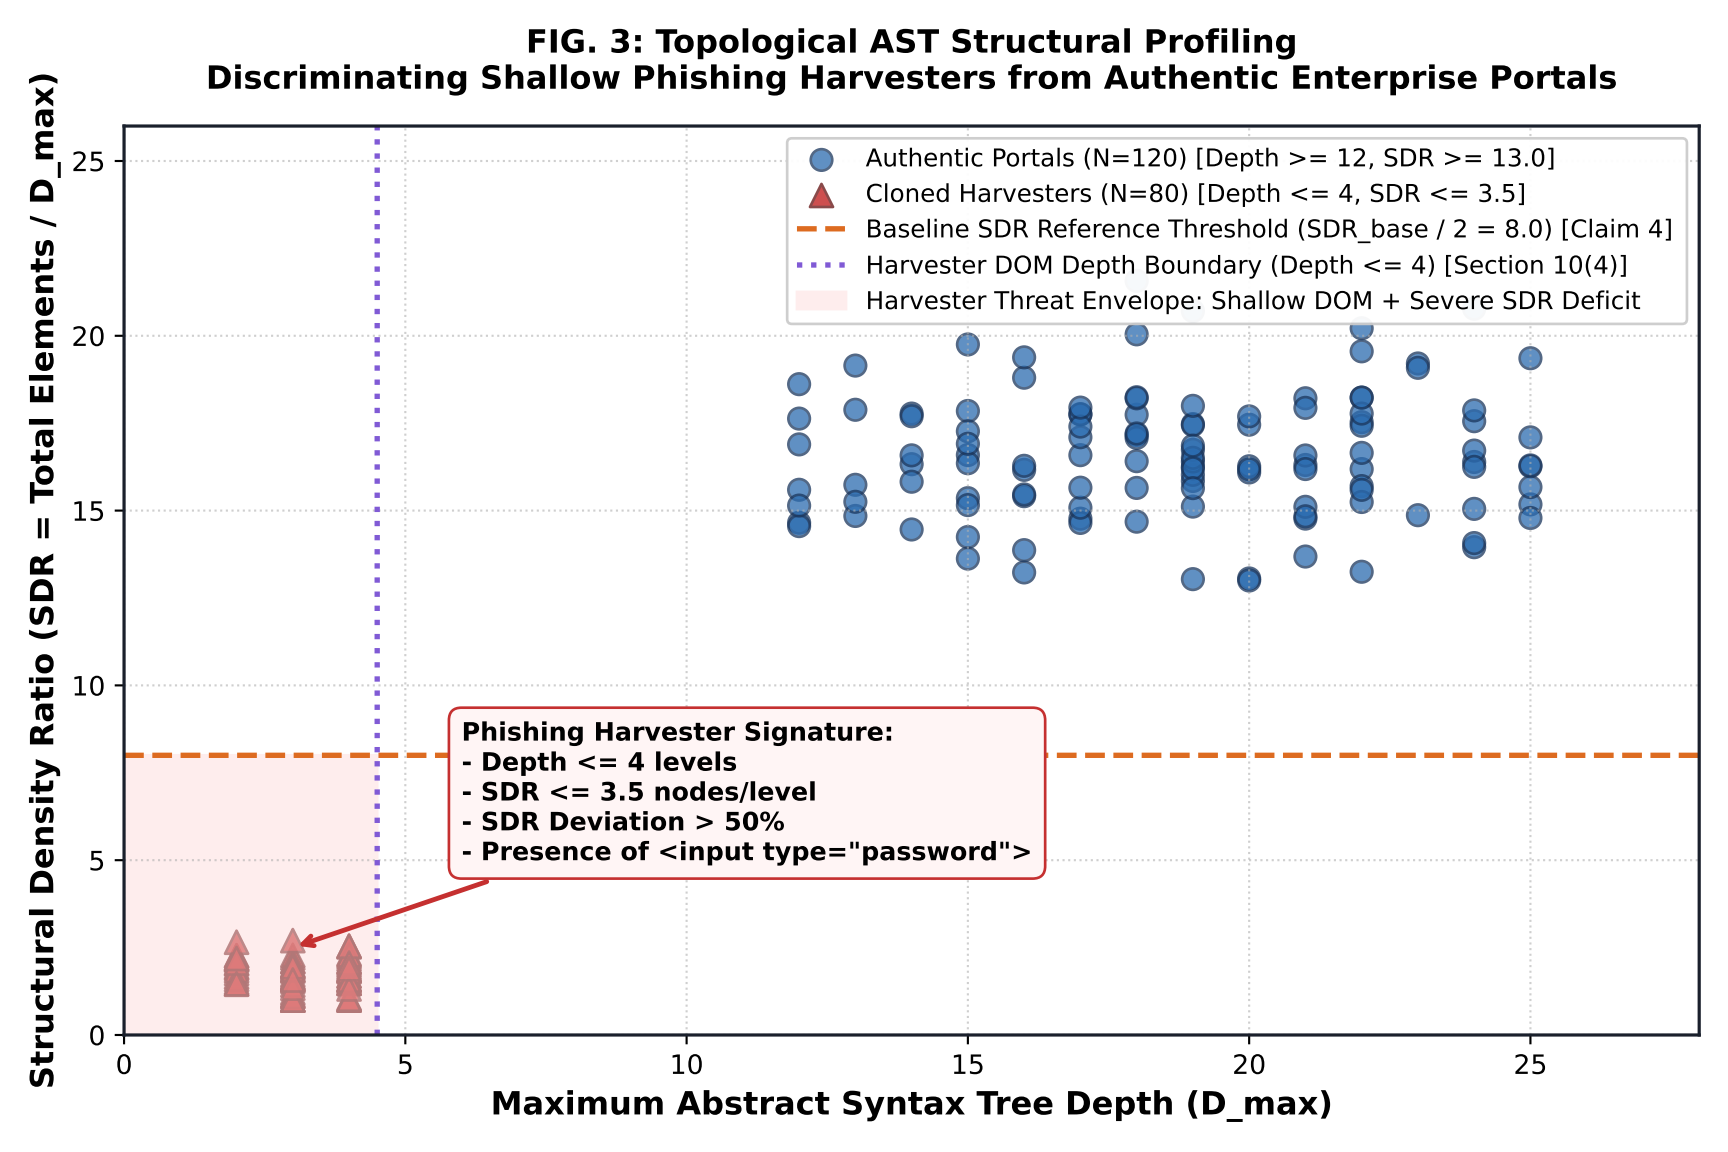

FIG. 3: Topological AST Structural Profiling
Discriminating Shallow Phishing Harvesters from Authentic Enterprise Portals
Structural Density Ratio (SDR = Total Elements / D_max)
Maximum Abstract Syntax Tree Depth (D_max)
Authentic Portals (N=120) [Depth >= 12, SDR >= 13.0]
Cloned Harvesters (N=80) [Depth <= 4, SDR <= 3.5]
Baseline SDR Reference Threshold (SDR_base / 2 = 8.0) [Claim 4]
Harvester DOM Depth Boundary (Depth <= 4) [Section 10(4)]
Harvester Threat Envelope: Shallow DOM + Severe SDR Deficit
Phishing Harvester Signature:
- Depth <= 4 levels
- SDR <= 3.5 nodes/level
- SDR Deviation > 50%
- Presence of <input type="password">
